

PIREPS at the KLM-VA

We don't use any special PIREP software. Instead, your flights will be automatically logged, saving you time for your flight preparation and allowing you to use an appropriate call sign for your flight, not necessarily your fixed KLM-VA ID-number. Of course the callsign you use has to be with the prefix KL*, AF*, DA*, MPH* or NAF*. All flights for KLM-VA are flown online on the IVAO network.

So, how does the PIREP-system work?

In Ivap in "other information" you have to put EXACTLY the following description: **KLM VA** or **KLMVA**, like in the picture below.

The IVAO-system will then recognize your flight as a flight for KLM-VA. You should connect at least 3 minutes at start-up before moving the aircraft and after landing stay connected for at least 3 minutes. When the status indicator on the website homepage has changed to "landed" it is safe to disconnect. Any earlier disconnect will result in the logging status "not arrived".

Do not use the "connect me as follow me" option in Ivap.

If your simulator or Ivap unfortunately crashes, you have 30 minutes to restart everything, reposition your aircraft, reconnect to IVAO and file your existing flightplan again. The system will then assume your flight continues and will add the flight data to the existing flight. All necessary information to restore the flight can be found by clicking the magnifier glass at the end of your flight text line on the homepage and next selecting the "Flight Details" tab.
